

BSCardBody

The BSCardBody component is designed to provide a styled content body within the BrightSpace Project, specifically for use inside card components to display textual information with consistent formatting.

Component Props

Prop Name	Type	Default Value	Description
children	React.ReactNode	—	The content to be rendered within the card body.
givenCardBodyStyle	string	—	Optional custom class name for overriding default styles.

Component Logic

- 1. **Style Determination:**
 - Uses makeStyles to define default styles for the card body.
 - If givenCardBodyStyle is provided, it overrides the default style; otherwise, the style from useStyles is applied.
- 2. **Rendering:**
 - Wraps the children prop in a Fluent UI Body1 component with the computed class name, ensuring consistent typography and layout.

Usage

Below is the usage for the BSCardBody component:

```
import BSCardBody from "../path/to/BSCardBody";

const MyCardContent = () => (
  <BSCardBody>
    <p>This is some text content inside the card body.</p>
  </BSCardBody>
);
```
