

BSCardFooter

The BSCardFooter component is designed to provide a styled footer section for card components within the BrightSpace Project.

Component Props

Prop Name	Type	Default Value	Description
children	React.ReactNode	—	The content to be rendered within the card footer.
givenCardFooterStyles	string	—	Optional custom class name for overriding default styles.

Component Logic

1. Style Determination:

- Uses `makeStyles` to define default styles for the card footer.
- If `givenCardFooterStyles` is provided, it overrides the default style; otherwise, the style from `useStyles` is applied.

2. Rendering:

- Wraps the `children` prop in a Fluent UI `CardFooter` component with the computed class name.

Usage

Below is the usage for the BSCardFooter component:

```
import BSCardFooter from "../path/to/BSCardFooter";

const MyCardFooter = () => (
  <BSCardFooter>
    <p>Footer content goes here.</p>
  </BSCardFooter>
);
```
