

BSCardHeader

The BSCardHeader component is designed to provide a styled header section for card components within the BrightSpace Project.

Component Props

Prop Name	Type	Default Value	Description
children	React.ReactNode	—	The header text content to be rendered inside the header.
givenCardHeaderStyles	string	—	Optional custom class name for overriding default header styles.

Component Logic

1. **Style Determination:**
 - Uses makeStyles to define default styles for the card header.
 - If givenCardHeaderStyles is provided, it overrides the default style; otherwise, the style from useStyles is applied.
2. **Rendering:**
 - Wraps the children prop in a Fluent UI CardHeader component.
 - Renders a Text component as an h1 with semibold weight and size 600 to display the header text.

Usage

Below is the usage for the BSCardHeader component:

```
import BSCardHeader from "../path/to/BSCardHeader";

const MyCard = () => (
  <div>
    <BSCardHeader>My Card Title</BSCardHeader>
    { /* Additional card content */ }
  </div>
);
```
