BSCardPreview

The `BSCardPreview` component is designed to provide a styled preview section for card components within the BrightSpace Project. **The image format in this component might not be changed by styles.**

Component Props

Prop Name	Type	Default Value	Description
children	React.ReactNode	—	The content to be rendered within the card preview.
givenCardPreviewStyles	string	—	Optional custom class name for overriding default styles.

Component Logic

1. **Style Determination:**
   - Uses `makeStyles` to define default styles for the card preview.
   - If `givenCardPreviewStyles` is provided, it overrides the default style; otherwise, the style from `useStyles` is applied.

2. **Rendering:**
   - Wraps the `children` prop in a Fluent UI `CardPreview` component with the computed class name.

Usage

Below is the usage for the `BSCardPreview` component:

```
import BSCardPreview from "./path/to/BSCardPreview";

const MyCardPreview = () => (
  <BSCardPreview>
    <p>This is a preview content inside the card.</p>
  </BSCardPreview>
);
```
