BSNavLink

The `BSNavLink` component is designed to create styled navigational links within the BrightSpace Project.

Component Props

The `BSNavLink` component accepts the following props:

Prop Name	Type	Default Value	Description
text	string	—	The text to display for the link.
route	string	—	The URL route to navigate to when the link is clicked.
givenLinkStyle	string	—	Optional custom class name for overriding default styles.
back	boolean	`false`	If `true`, displays a left arrow indicating backward navigation.
noArrow	boolean	`false`	If `true`, no arrow icon is displayed.

Component Logic

1. **Routing:**

   - Uses `RouterLink` to navigate to the specified `route` on click.

2. **Style Determination:**

   - If `givenLinkStyle` is provided, it overrides the default style; otherwise, the style from `useStyles` is applied.

3. **Arrow Display:**

   - If `noArrow` is set to `true`, the component renders only the text without any arrow icons.
   - If `noArrow` is `false`:
     - When `back` is `false`, an arrow pointing to the right (`ArrowCircleRight20Regular`) is appended after the text.
     - When `back` is `true`, an arrow pointing to the left (`ArrowCircleLeft20Regular`) is prepended before the text.

Usage

Below is the usage for the `BSNavLink` component:

```
import BSNavLink from "./path/to/BSNavLink";
const MyNavigation = () => (
  <div>
    <BSNavLink text={"Learn More about the resources"} route={"/bs-resource"
    <BSNavLink text={"Go Back Home"} route={"/"} back={true} />
    <BSNavLink text={"No arrow link"} route={"/"} noArrow={true} />
  </div>
);
```
